YACHT
REC 370 02.03.01

Multiple record passes can be made during a single replay cycle

During the first replay cycle in which a control is recorded, it is automatically punched in and out when recording starts and stops.

Note that replay does not have to start at the beginning of the session. Replay may be started at any point up to the end of the session.

Note that the duration of the current session is extended by recording past the replay end time. On the next replay cycle, replay will end at this new time (if the user does not record past it again).

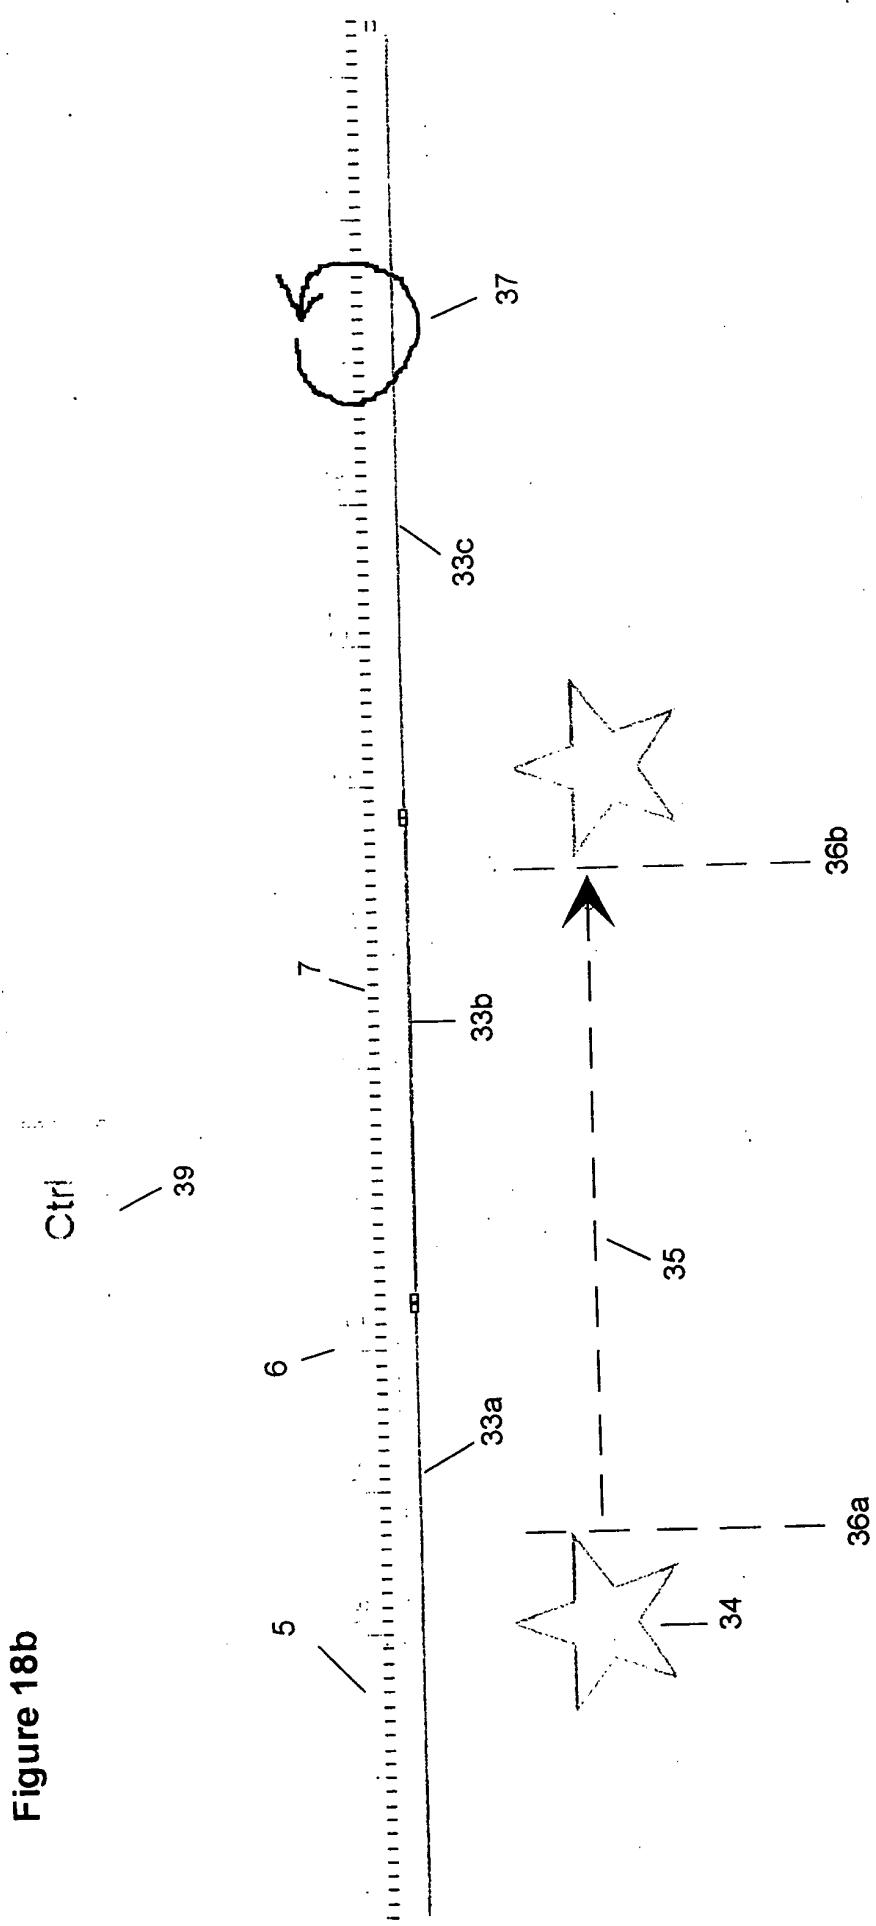

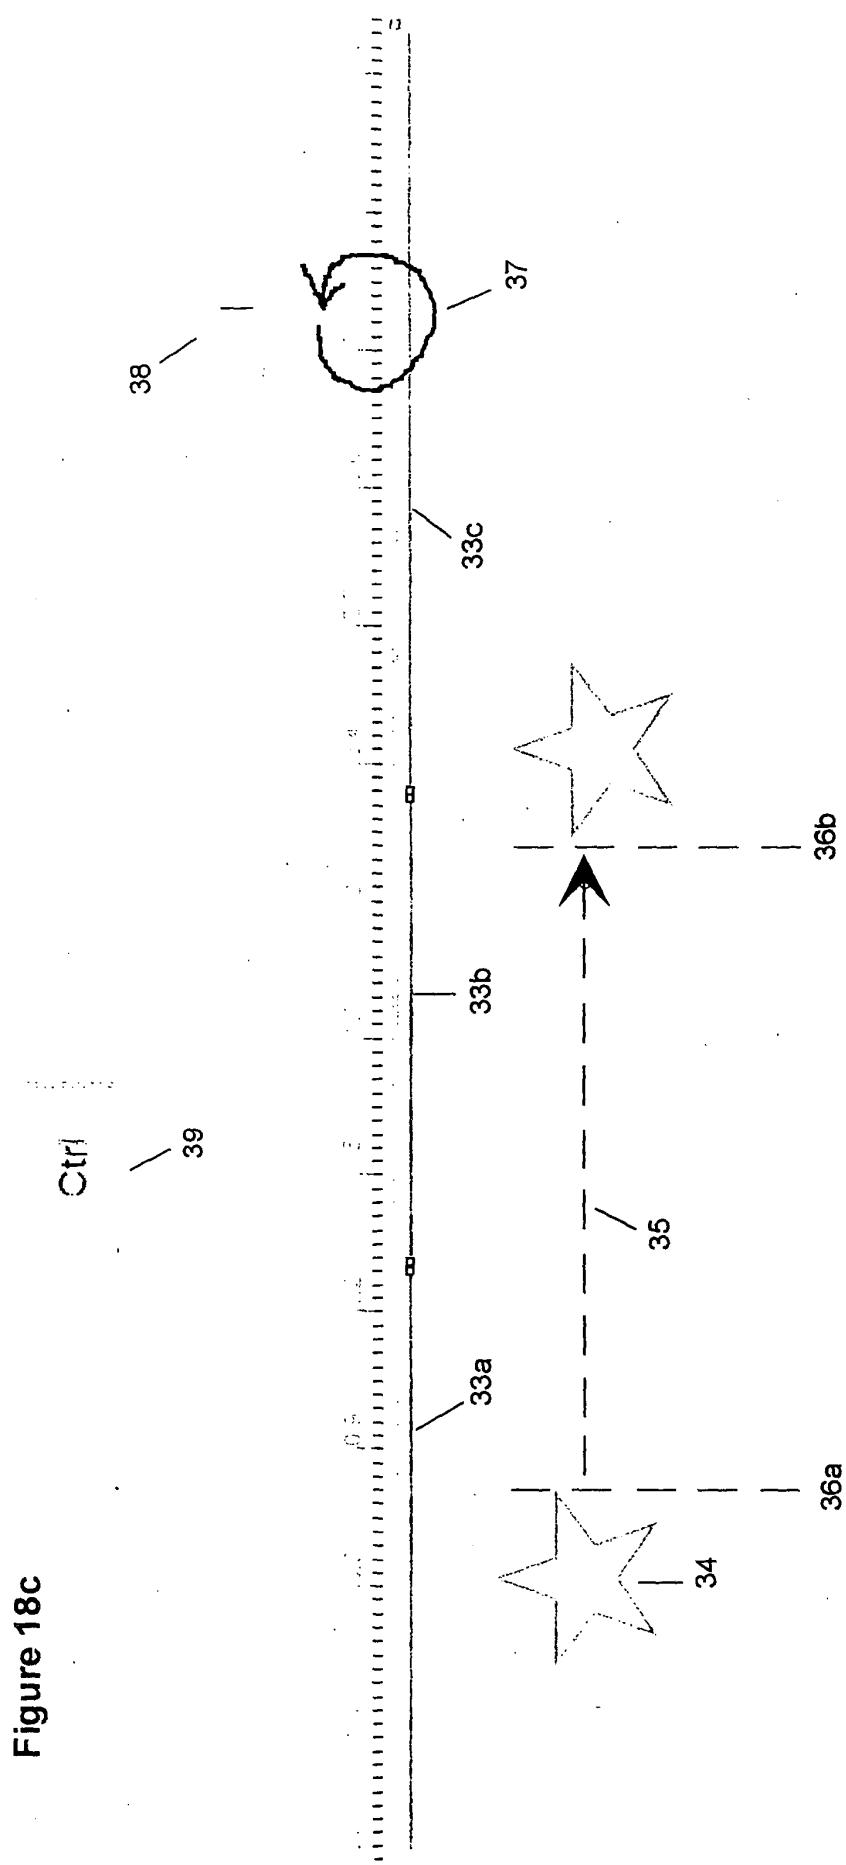

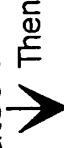

Figure 18c

User opens picture file browser

User navigates to required directory

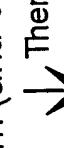

User selects picture with blue arrow drawn onto blackspace

User draws modifier arrow

User types film (and optionally frame rate)

Is there a dramation currently loaded for editing

Get current replay time

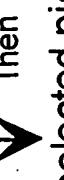

Set start time to zero

Create picture control using first selected picture file

Record picture in dramation

Have all selected picture files been used?

Get next selected picture file

Load image

Request new dramation transaction for picture control (creates new playbar)
